SUMMARY

Business Intelligence engineer with hands-on experience designing semantic models and building dashboards to support operational and financial workflows. Implemented Power BI and QuickSight solutions, reducing processing time by 30% and improving query performance through optimized Snowflake and Azure Data Factory pipelines. Skilled in SQL, data modeling, and collaborating with stakeholders to translate requirements into actionable visualizations.

EDUCATION

Northeastern University <i>Master of Science, Information Systems</i> Coursework: Big Data and Intelligent Analytics, Data Architecture & Business Intelligence, Data Science Methods & Tools	Dec 2025 <i>USA</i>
University of Mumbai <i>Bachelor of Technology, Information Technology</i> Coursework: Data Mining and Business Intelligence, Database Management, Cloud Computing Services	Jun 2021 <i>India</i>

SKILLS

Databases & Cloud: Snowflake, SQL, Git, MongoDB, DynamoDB, S3, Glue, Redshift, EMR, Lambda, Athena, IAM, Kinesis Languages: Python, R, SQL, Pro*C Tools: Airflow, ADF, Control-M, DBT, Apache Spark, Kafka, Databricks Cloud Platforms: AWS, S3, Glue, EMR, Lambda, Athena, Kinesis, IAM, Azure, ADF, Blob Storage Analytical Toolkit: Tableau, PowerBI, Google Data Studio, Excel, QuickSight AI Data Automation: RAG, Agentic AI, PineCone, LLM, n8n, Prompt engineering Data Modeling: Data Modeling, Relational Data Modeling

EXPERIENCE

Atlas SP Data Engineer Co-op New York, NY - Implemented ETL pipelines to automate ingestion of millions of records from multiple sources, reducing processing time and showcasing data pipeline design best practices - Developed C# scripts to pull real-time market data from Bloomberg and integrated them into Azure Data Factory pipelines, delivering daily automated data refreshes without manual intervention. - Stored processed data in Azure Blob Storage & vector indexes, enabling RAG-based querying improving consistency by 30%. - Designed normalized & dimensional relational data models in Snowflake supporting analytics, improving query performance and reporting. - Refactored and optimized queries in Snowflake to retrieve data only on market days, resulting in cleaner and faster data retrieval - Optimized batch streaming workflows using Databricks, integrating Kafka & Presto for scalable data processing, reducing latency - Automated pipeline scheduling and monitoring with Control-M, reducing manual effort by 10 hours/wk and improving reliability	Jan 2025 - Aug 2025
Ingram Micro Business Intelligence Analyst Mumbai, India - Designed Power BI semantic models using star-schema data modeling and advanced DAX measures, enabling real-time tracking of logistics KPIs for faster decision-making - Modularized transformations and incremental DBT models, reducing data processing time by ~25% and accelerating OPS analytics. - Engineered Fault-tolerant ETL pipelines to automate tasks within IM-First improving workflows, boosting efficiency by 30% - Developed AWS QuickSight dashboards, enabling operations teams to monitor shipment status, transit delays, and SLA adherence - Improved data freshness and reporting reliability by automating ingestion scheduling and retries via Airflow within CI/CD pipelines, ensuring data validation across sources - Built reusable SQL models in Amazon RedShift using DBT and Airflow, enabling reliable analytics and reporting for 5+ business teams and improving dataset availability	Oct 2022 - Aug 2023
ICICI Securities Associate Software Developer Mumbai, India - Led 5 Disaster Recovery (DR) drills, ensuring uninterrupted connectivity to NSE & BSE trading platforms, mitigating potential loss - Maintained backend components with Pro*C, COBOL, Unix shell scripts, and batch jobs for latency-sensitive trading systems, achieving 99.9% uptime and supporting real-time order processing - Optimized complex SQL queries using window functions and partition pruning, reducing time by 40%, enabling faster reporting and supporting data modeling efforts - Deployed Python scripts for data cleaning, reducing processing time by 50% & automated Tableau reports, saving 8 hours weekly - Applied statistical trend analysis on large datasets with R and SQL, enhanced forecasting reliability and improved reporting accuracy for senior traders - Addressed and resolved 20+ live issues during market hours, maintaining uninterrupted operations of critical systems	Jun 2021 - Sep 2022

PROJECTS

NewsScope - Built NewsScope, an industry-specific news aggregator, using Python (BeautifulSoup & Scrappy), Snowflake & DBT - Maintained a robust data schema, performing rigorous data validations (Pydantic 2 & Pytest) to guarantee high-quality data - Designed a user-friendly Streamlit interface & automated ETL pipelines with Airflow, containerizing the platform with Docker	Apr 2024
Drug Review Analysis for Patient Condition Diagnosis - Crafted an NLP tool for classifying patient conditions from drug reviews, implementing data lemmatization & stemming - Visualized sentiment distribution with pie charts to enhance data interpretation & tested various models achieving high accuracy	Sep 2023
HR Analytics Created an HR analytics board for visualizing and analyzing employee performance and HR metrics with advanced DAX calculations	Jul 2023
